founders who build
and operate

01 · WHO WE ARE

We build for ourselves before we build for you.

Bithrah Tech is a Saudi Venture Engineering company based in Riyadh. We step into a real operational problem, a Venture Engineer owns the journey until the system runs inside the business, and AI is our operating layer, not a feature. Our products and our clients' systems come out of the same loop: every project leaves engines and knowledge that enter the next one, so time shrinks and defects fall, and the client benefits first because they start where the systems before them ended.

THE BITHRAH LOOP

01

A real
problem

02

A Venture
Engineer
owns the
journey

03

A system
running
inside the
business

04

Learning
from reality

05

Reusable
assets

06

The next
build is
stronger

Where we are going, and what we do every day.

Vision

To become a system for making systems: every build starts where the one before it ended, and a small team can do what used to need a whole company.

Mission

We step into a real operational problem, come out with a system running inside the business, and operate it. Then we turn what we learned into assets that enter the next project.

OUR OBJECTIVES

01 · Every project leaves an asset

No project ships without an engine or knowledge the next one uses.

02 · Better economics every time

Less time, lower cost and higher quality than the build before it.

03 · The measure is one person's capability

We measure ourselves by what one person can build, not by headcount.

04 · Knowledge is inherited

The way we discover, build and measure is written down, so it never stays locked in one head.

What we are not

Not a software agency, not an incubator, not an accelerator. We do not sell developer hours; we sell a written scope of delivery and a system that runs where it belongs.

EXECUTION CAPABILITIES

Operations platforms built around the way you work

iOS and Android apps from design to the store

Web platforms with Arabic interfaces designed, not translated

Automation and AI agents inside the system

E-invoicing and electronically approved contracts

Numbers from systems running today.

4.9

Candles rating on the App Store from 42 ratings, check it on the store itself

43

days between our two App Store launches

718

active quality points the system covers across two towers, out of 878 registered

2,715

registered accounts on the Turjuman engine

220

personal invitations our engine issued, opened, confirmed and tracked

18

published systems whose links answer today, across our products and client systems

Every number on this page was measured by a command run on 2026-09-08, with its source on record in our systems registry. What is not measured is not written.

VERIFY IT YOURSELF

The Candles page on the App Store

tech.bithrah.sa and every link on it

contracts.bithrah.sa to verify any contract or invoice we issued

OUR COMMITMENTS TO YOU

Scope, plan and price in writing before the first line of code

You know the limits of what will be built, its phases and its price before paying anything.

You know what you own before you sign

The contract defines code ownership and the operating model; a system built for you alone is fully yours.

Your data is always yours

A full export whenever you ask, and a written exit plan inside the operating agreement.

You receive a running system, not the burden of running it

We build and operate it under our responsibility, so you inherit no maintenance and hire no technical team.

A contract and an invoice with legal weight

The contract is approved electronically on our platform, and the tax invoice is cleared with ZATCA.

If we are not the right fit, you know from the first reply

You hear back within one business day, and if your problem is outside what we master we say so plainly.

Products we own and operate ourselves.

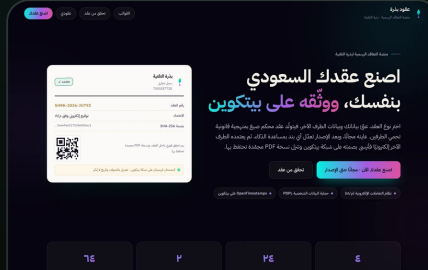

Products we own and operate ourselves, each with its own identity and a measured proof badge. One engine builds our products and our clients' systems.

Candles

App Store · 4.9 from 42 ratings

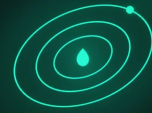

A Saudi iPhone app that puts your moment on your city map so people nearby see it now.

Bithrah Contracts

Anchored on Bitcoin

A complete Saudi contract approved electronically by both parties, with a verifiable number, timestamp and frozen PDF.

Madar

Tax invoice cleared with ZATCA

The team operating system: from a meeting or a client to a cleared tax invoice, without leaving the system.

Invoicing Engine

Phase 2 · cleared with ZATCA

Builds the invoice, signs it, submits it to ZATCA and returns a cleared document with a verification code.

Booking

Booking · auto Meet · calendar invite

A booking page in the company identity: defined sessions, calendar availability, a confirmed meeting with a room and mail.

Lawha

Arabic description in, full system out

A systems factory: describe your business in Arabic and a complete system comes out with relations, states, indicators and accounts.

The Bithrah Platform

Venture OS · new edition in build

An operating system for the founder journey: eight stations and twenty virtual departments, being rebuilt now.

Hasad

Isolated accounts and workspaces

Exhibition cards are captured, read and classified into the team workspace, then turned into follow-up.

Bithrah Cards

Logo QR · Apple Wallet pass

A digital card per member: a page, print, a logo QR and a Wallet pass signed in Bithrah's name.

And engines and tools from the same loop.

Hotel OS

Procurement governance and custody chain

A hotel operating layer outside the guest room: every receipt and field job ends in documented proof.

Invitation Engine

220 personal invitations issued

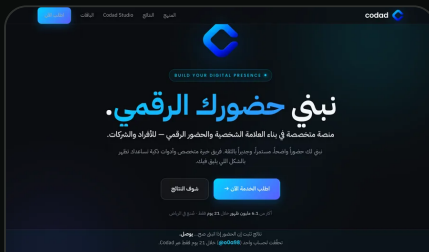

An invitation per guest on an unguessable link, opened, confirmed and tracked, in three templates.

Mahader

A bot joins the meeting, leaves with tasks

Meeting intelligence in Arabic: transcription, summary and decisions turned into owned tasks.

Codad

Managed client accounts

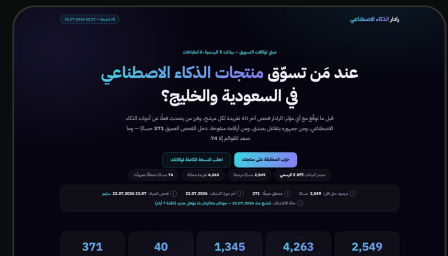

A system that builds digital presence on X and LinkedIn: it writes, publishes and measures.

Turjuman

2,715 registered accounts

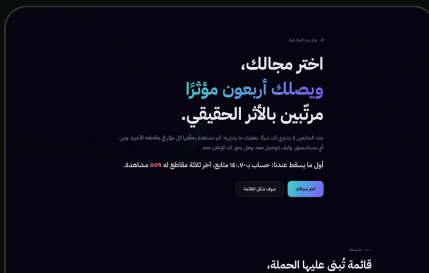

A transcription, translation and dubbing engine for video, embedded inside other systems.

Radar

Live AI-tools radar

Tracks who actually talks about AI tools across Saudi and the Gulf, built for agencies.

TikTok Radar

Creators ranked by real impact

A list of TikTok creators in your field by real views, built per agency on request.

One engine

Our products and our clients' systems come out of the same loop: an engine built inside a product comes back into a client system, and the other way round.

Our systems inside our clients' businesses today.

Systems we designed and built for clients, running inside their businesses under their names and identities.

The logo for KAFD, featuring the letters K, A, F, and D in a bold, sans-serif font.

مركز الملك عبدالله المالي

**KAFD · King Abdullah
Financial District**

A service-quality system across two towers, in their identity and under the name they approved.

The logo for Athar Ads, featuring the word "ATHAR" in a bold, sans-serif font with a blue vertical bar to the left of the "H", followed by ".ads" in a smaller font.

Athar Ads · marketing and e-commerce

An online-store migration system their own team runs for their merchants.

The logo for Liwan, featuring the word "ليوان" in Arabic script and "Liwan" in a sans-serif font, with a stylized geometric pattern to the right.

**Liwan · real-estate
development**

A bilingual invitation and RSVP system that works inside China, in their identity and typeface.

The logo for Shafaq, featuring a stylized orange and blue circular icon to the left of the word "SHAFaq" in a bold, sans-serif font.

**Shafaq Studio · digital
products**

A site built and handed over with full ownership to its owner.

The logo for NiHao, featuring the Chinese characters "你好" (Hello) in red above the stylized red Arabic word "نيلو" (NiHao), with two small yellow circles.

**NiHao community · Saudi
Arabia and China**

A community app on the App Store and the web.

INSIDE THE CLIENT'S ENVIRONMENT

Their identity and name

The system carries the client's identity and the name they approved, not ours.

Their infrastructure or ours

We operate it on our infrastructure under our responsibility, or on the client's, inside the Kingdom on request.

Their team runs it

We hand over a system the client's own team runs, and stay with them under the operating agreement.

KAFD · a service-quality system across two towers.

A live operating environment at King Abdullah Financial District, and one question that needed an openable answer: who did what, when, and with what proof.

Staff scan a location code under their own identity and upload before-and-after photos, visitors rate their experience from the same board, and the follow-up dashboard shows compliance live and covers absences in one tap. The system carries their official identity and the name they approved, covering 718 active quality points across two towers.

A sovereign hosting option inside Saudi Arabia is ready and proven for this system.

718

identity

Live

follow-up
dashboard

PHASES

A live model

A working model on the place's own data before any commitment.

Installed across two towers

Location codes and follow-up dashboards in their official identity.

A field calibration week

Real operation with workers and supervisors, windows tuned from the field.

Report and decision

A weekly report in numbers that the expansion decision is built on.

What remained after delivery

A general field-operations engine: a location code, before-and-after photos, a task, a rating and a coverage matrix. It drops into any other field operation today.

Athar Ads · the online-store migration system.

A marketing and e-commerce agency moves its merchants' stores from one platform to another, and that move was manual work that swallowed days and left behind differences nobody could vouch for.

The system now moves the whole store: products with their options, quantities and images, the category tree and customer data, then matches destination against source and issues a migration certificate.

Their own team runs it for their merchants' stores from one board: every step has a state and every stall has an owner, and we develop and operate it with them under the operating agreement.

of 620

**Their
team**

operates it

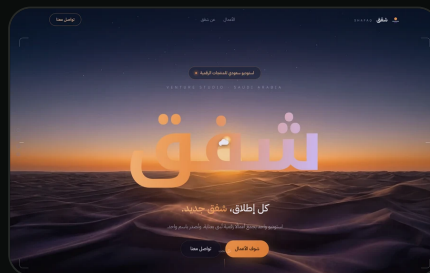

What remained after delivery

A general migration engine: a reader for the source, a matcher for the destination, a job queue with states and an owner for every stall, and a certificate at the end. It drops onto any other data migration.

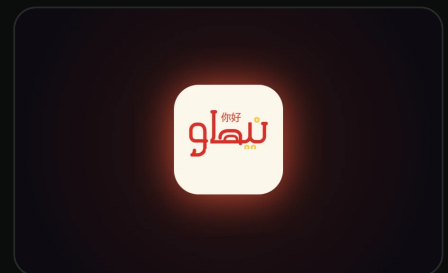

Liwan

A bilingual invitation and RSVP system that works inside China, in their identity and typeface, delivered and used at a real seminar.

Shafaq Studio

A digital-studio site built and handed over with full ownership, with domain, mail and hosting set up.

NiHao community

An app connecting Saudi Arabia and China for its community, on the App Store since 2026 and on the web.

From your problem to a system running at your place.

1 · A meeting

Book a meeting in a minute and pick the session; the meeting link and calendar invite arrive at once.

2 · Scope, plan and price

You receive the scope, phases and price in writing before the first line of code. The decision is yours.

3 · An electronically approved contract

The offer and contract arrive on a link you approve electronically, with a verifiable number and timestamp.

4 · Build in short releases

You watch progress on a live link, and every phase has an acceptance gate.

5 · Launch and operate

We publish, measure and operate the system with you, and you receive a tax invoice cleared with ZATCA.

THE TEAM

An operator-founder and his co-founders.

Our method is written in skills and engines, so everyone who joins starts where the one before them ended.

What procurement needs first.

Registered name	Bithrah Tech Est. (مؤسسة بذرة التقنية)
Unified national number · CR	7050187728
CR issue date	26 / 05 / 2025
Entity type	Saudi establishment · 100% Saudi-owned
Tax identification number (TIN)	3130237895
VAT registration number	313023789500003
National address	Building 3050, Eisa Bin Ibrahim Al Rabe'i St., Al Arid District, Riyadh 13338 · RRRB3050
Official website	tech.bithrah.sa
Official email	info@bithrah.sa

Data and hosting

- Systems run on infrastructure we operate ourselves, with a sovereign hosting option inside the Kingdom on request, proven on a live system.
- Regular backups tested by actual restores, and an audit log for every sensitive action.
- Client data belongs to the client: a full export on request and a written exit plan in the operating agreement.
- We never sell or share data with third parties, and we design every system in line with the Saudi Personal Data Protection Law.

Contracting and invoicing

An electronically approved contract

The offer and contract on contracts.bithrah.sa, with a verifiable number, a timestamp, a frozen PDF and a permanent verification code.

A cleared tax invoice

Every invoice is cleared with ZATCA and you receive a verification link for it.

An operating agreement with an exit plan

Scope, price, backups, export and the exit plan are written before operation starts.

Four reasons the build is shorter with us.

Proven engines

Your system stands on engines that ran in live systems before it, so you never pay for a first experiment.

One person owns your journey

One Venture Engineer from the problem to a running system, instead of a chain of roles.

Native Arabic, and English

Our Arabic interfaces are designed, not translated, and this file ships in two languages.

Your system carries your name

We build it under your name and identity, and your team uses it every day.

WHAT HAPPENS AFTER YOUR MESSAGE

Within one business day

A written reply: whether your problem is one we master, and the next step.

Within days

Scope, plan and price in writing, and a contract link you approve electronically.

After approval

Short releases on a live link you watch yourself until the system runs at your place.

LET US TALK

Write us your problem in two lines.

You receive the scope, plan and price in writing before the first line of code, then you decide.
